Smoke test:	Unacceptable
Acceptance test:	low
Found issues:	40

Top severity issues

ID	Severity
QATC-1019178	Critical
QATC-1018810	Critical
QATC-1018800	Critical
QATC-1018746	Critical
QATC-1019132	Major
QATC-1019103	Major
QATC-1019074	Major
QATC-1018968	Major
QATC-1018957	Major
QATC-1018955	Major
QATC-1018977	Average
QATC-1018931	Average
QATC-1018930	Average

Testing environment

Operating system:	Android 16
Device:	Oneplus 12r

Recommendations

- As my recommend fixing the QATC-1019178 and QATC-1018746 defects as a priority, since the greeting message does not play on the recipient's side at all – this breaks the app's core function end-to-end and prevents any greeting from actually being delivered to a caller.
- I also recommend fixing QATC-1018810, since tapping "Try Voicemail FREE for 2 weeks" does not start the 14-day trial countdown at all – the app never tracks when the trial should expire, so it never blocks access once the period is over.

Testing dates:	17.08.2026 - 20.08.2026
Time spent:	36 hours

Voicemail

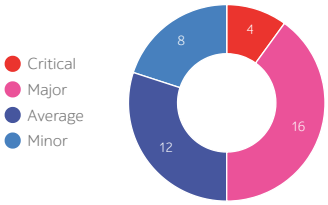

Product version: 1.0

General quality analysis

The overall quality of the application can be estimated as **Low**. The total number of defects is 40. Functional defects prevail **28** against **12** GUI-level issues. **Critical defects account for 4** , and **Major defects for 16** – together more than half of all issues found. The main Critical defect is that the greeting message does not play on the recipient's side at all (QATC-1019178, QATC-1018746) – meaning the app's core function, playing a personal greeting to the caller, is effectively missing. No crash or system-blocking defects were found beyond this.

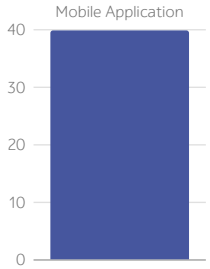

Detailed quality analysis

The total number of defects by severity

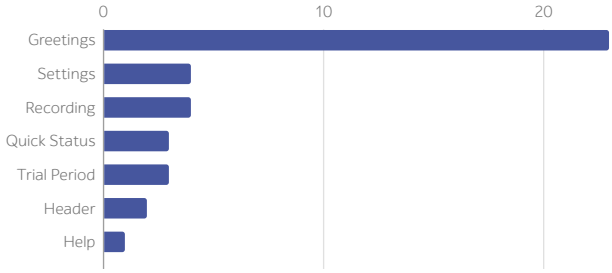

The chart shows the statistics of defects by the degree of the negative impact they have on the application. **40%** of issues have **Major** severity. **Average (30%)** and **Minor (20%)** defects make up most of the remainder, with **Critical issues (10%)** also identified. No Enhancement suggestion.

The total number of defects by platform

The chart presents the ratio of defects by platform. For **Mobile Application** platform 40 issues were found.

The total number of defects by components

The chart illustrates the distribution of defects across the application modules. The highest number of defects was identified in the **"Greetings" module (25)**. The **"Settings" module (4)** and **"Recording" module (4)** contained the next highest number of defects, followed by the **"Quick Status"** and **"Trial Period"** modules with **3 defects each**, while the **"Help" and "Header" module** had the fewest, which are **1 and 2 defect**.

Quality of separate modules

Module	Quality	Comments
Greetings	Low	The quality of this module is estimated as Low. 23 defects were found here, 2 of them with Critical severity and 10 with Major severity – the most among all modules. The most significant issues are that the greeting message plays on the recipient's own device instead of being heard by the caller (QATC-1019178), and that greetings fail to play at all during an incoming call from an assigned/selected contact despite being active (QATC-1018746). The message also does not stop when a call is answered (QATC-1019132) and does not trigger when a call arrives exactly at the configured start/end time (QATC-1019103). Recipient and Group selection is broken across the board, including pages that load indefinitely when contact permission is denied (QATC-1018968) and blank spaces that can be saved as Recipients (QATC-1018957).The list of defects actual for module "Greetings" is here.
Settings	Low	The quality of this module is estimated as Low. 4 defects were found here, 1 with Critical severity. The most significant issue is that tapping "Purchase" does not navigate to the purchase page, blocking users from completing payment (QATC-1018800). The "Time before greeting" setting also fails to persist and always resets to 5 (QATC-1018811).The list of defects actual for module "Settings" is here.
Trial Period	Low	The quality of this module is estimated as Low. 3 defects were found here, 1 with Critical severity. The most significant issue is that the "Try Voicemail FREE for 2 weeks" option on the Welcome page does not grant trial access, leaving Purchase as the only way into the app (QATC-1018810). The trial-expired screen also fails to appear even after the 14-day trial period has passed (QATC-1018902), and no expiry warning banner is shown even as the trial is about to end (QATC-1018892). The list of defects actual for module "Trial Period" is here.
Quick Status	Low	The quality of this module is estimated as low. 3 defects were found here, 2 of them with Major severity. The most significant issues are that a Quick Status cannot be deleted once created (QATC-1019074), and that the status message plays on the user's own phone instead of identifying who is calling (QATC-1018884). Additionally, Quick Status uses a radio action button rather than a proper On/Off toggle (QATC-1018977). The list of defects actual for module "Quick Status" is here.
Header	High	The quality of this module is estimated as High.Two defects were found here. Minor issues include the app header showing "GET PERSONAL" instead of the correct page title on the main screen and across the app (QATC-1018928, QATC-1018922). The list of defects actual for module "Settings" is here.
Recording	Medium	The quality of this module is estimated as Medium. 4 defects were found here, 1 with Major severity: audio recording does not resume after Pause and instead restarts from 0:00 (QATC-1018655). The remaining defects are Average and Minor, including recordings that can be saved with a 0-second duration (QATC-1018633), a progress bar that does not update while recording time is increasing (QATC-1018610), and a "Stoped" label typo shown during recording (QATC-1018823). The list of defects actual for module "Recording" is here.
Help	High	The quality of this module is estimated as High. 1 defect was found here, with Minor severity: the Settings Help page does not explain how Greetings and Quick Status actually work, only covering how to stop the service (QATC-1018821). The list of defects actual for module "Help" is here.
